The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 13-15 and 18-20 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Goglio (5,532,011).

Goglio discloses a process for packaging coffee. The abstract indicates that the package coffee is ground and formed into a flexible or semi-rigid container that is preliminarily filled with gas. The apparatus at figure 1, further shows the overall process stations. At column 3, line 7-10, the concept of introducing nitrogen or carbon dioxide into the process. The concept of processing beans, rather than ground coffee, is shown at column 2, lines 38-39.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7-12, 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goglio in view of Hibi (5,368,875).

Goglio discloses a process for packaging coffee. The abstract indicates that the package coffee is ground and formed into a flexible or semi-rigid container that is preliminarily filled with gas. The apparatus at figure 1, further shows the overall process stations. At column 3, line 7-10, the concept of introducing nitrogen or carbon dioxide into the process. The concept of processing beans, rather than ground coffee, is shown at column 2, lines 38-39. The claims appear to differ from the reference in the additional step of roasting the coffee beans. Hibi teaches roasting beans prior to grinding or packaging them (see column 1, lines 10-37). Hibi also teaches that quick cooling of the roasted beans in nitrogen or other inert gas acts to maintain flavor in the beans (column 18, lines 26-29).
